Reviewed branch components — additive evidence

Weighted Add11: field
Field normalization and polynomial validity

Weighted Add11: UInt64
Canonical payload values and conditional distinct dispatch

Weighted Add11: composed validity
Guard + canonicality + nonzero weights + normalized validity

Degree-one doubling: field
Tangent quotient; self-add guard and zero-ordinate precedence

Degree-one doubling: UInt64
Literal5 bridge at p5; conditional word validity

Kummer signed-duplicate helper
8 planted/helper controls; root replay; graph unchanged

No rankings. Full-cohort and timing ratios: null. Original 1,260-target scope preserved.

Polynomial validity is distinct from class-sum, compiler and counter correctness.
