Large-curve coverage: fixed public correctness fixtures
SEC2 prime parameters + public generator G
256 / 256 / 384 / 521 bits
Large binary fields: theorem applies
no large-binary proof files generated
S = {x(G), x(2G), x(4G)}; R = 16G
5 variables, 6 explicit polynomial inputs
Native provenance + OpenSSL point recheck
112 public points; G through 28G nonzero
Native constructive producer
separate modular polynomial arithmetic
Independent exact BigUint DAG replay
413 / 415 / 415 / 415 nodes; cap 5
Uniform lower + first-fall proofs
ordinary guarded B=3 model
Combined mathematical application
first / last = (4,5)
