P-192 quartic: complete pair census

Frozen Type I point set | exact geometry checks

FROZEN POINT SET

9,925

rational quartic points

same input for both full scans

UNORDERED PAIRS SCANNED

49,247,850

collinearity and tangency

two independently checked passes

COLLINEAR SOURCE QUARTETS

4,892

each line has exactly 4 selected points

0 novel 3-point or 4-point lines

SELECTED-ENDPOINT TANGENCY CHECK

0 **tangent pairs found** of 49,247,850 tested

Geometric incidence alone is not a known-scalar relation or a measured index-calculus cost.

Tangency result covers selected endpoints only; residual-point ramification is separate.
