Untrusted proof-input constructors
GMP / FLINT coordinates, slopes, factors
35 kernel-checked Lucas nodes
Actual prime p; 160-bit bounds
448 actual point nodes
On-curve checks + secant/tangent certificates
Known source correction
Old coefficient has different j
Corrected curve has j = -32768
Actual Mathlib group conclusion
pG = O; G != O; exact order p
Fixed known-answer relation Q = dG
Scope remains explicit
No Smart execution or security cost yet
Whole curve point count not formalized
