Every t: F3, g=12t+2, n=24t+5
Actual pairs identity and (X^d, ±1), 1≤d≤g
All ordered pairs: explicit normalized Cantor runs
Same signs: compose, reduce once if needed
Opposite signs: gcd cancellation / degree difference
Identity and input-swap certificates
Unique polynomial output and closure
pairwiseOutput / cantorAdd defined here
Before any group transport
Actual signed-residue bijection to ZMod n
Every candidate output respects residue addition
Transport additive group; prove sum = cantorAdd
Every group sum has an actual normalized run
Actual generator coordinates (X,1), exact order n
Every member is generated by a scalar < n
Earlier actualStep equals generator addition
Unbounded genus and order
All group members smooth, fraction 1
Full valid-pair ambient fraction < 1
64 declarations pass, 0 failing / 0 trusted-native
Group law verified on the family
Full ambient group / geometric Picard bridge open
Known torsion family; signed standing unverified
