Frozen actual F25 arithmetic
Nine torsion points; actual P,Q basis
Explicit coordinate factors
x=0 or x^3=1; y=+/-1 or +/-beta
Actual point base change
Nonsingularity reflects; all 3-torsion descends
Algebraically closed K / F5
Embedding constructed by IsAlgClosed.lift
Actual additive equivalence
E(F25)[3] = E(K)[3] under the embedding
Geometric torsion has nine points
Actual basis (Z/3)^2; no rank premise
Frobenius commutes with point map
Actual matrix (a,b) -> (a,-b)
Actual F5-rational image
Precisely b=0
Open: all-curve BK; canonical pairing divisors;
general MOV / Frey-Ruck; p<500 census
