Original 2004 manuscript, p5, Remark 1
Missing operator at a line break
Literal product and additive repair kept distinct
F2 control
All 16 tuples: literal = repair
Prime-field checks miss the omission
Lean: actual quadratic resultant
= s1⁴+s3⁴+s4(s3+s1)²+s4²s1²+s3²
Every characteristic-two field, a and tuple
Actual F4, alpha²+alpha+1=0
E: y²+xy=x³+1, nonsingular
Tuple (1,1,alpha,alpha²): s1=s3=s4=1
Actual Mathlib points
P=(1,0), T=(0,1), R=(alpha,0), S=(alpha²,alpha²)
2P=T, R+S=T, 2T=O; hence P+P+R+S=O
Actual resultant = 0; literal product = 1
Lean directly negates formula equality and vanishing
Local checks; signed standing unverified
