Actual S3 cycles: degree 2
All four actual S4 base positions: degree 4
First two inputs
Concrete scalar-fixing seed permutations
Introduced inputs
Actual selected birth variable
Actual recursively lifted ring equivalences
Actual resultant recurrence; sharp old degree 2d
Induct through every future stage
Actual sharp degree 2^(stage+1)
Lean Fin-position coverage + last-input proof
Every input, every arity m >= 3: degree 2^(m-2)
