# Review boundary · isogeny-class rho · 2026-10-19

## Checked algebraic dependencies

Explicit homomorphism + injectivity
⇒ scalar transport and answer reflection

Pinned Lean 4.34.1; concrete curve bridge owed

## Additional model hypotheses needed

Transported encodings + coupled random choices
⇒ unit-cost oracle operation distribution

Does not certify concrete hash walks or wall cost

## Historical experiment records preserved

Frozen protocol, raw rows, tables and graphs
Companion KS counterexample: [1,1] vs [1,1]

Recorded D=1; correct D=0 · not a new timed run

## Research gates still open

Corrected native analysis + shared-seed covariance
Producer lineage + sealed native admission

Unisolated VM wall ratios remain observations
