Structured IC: post-merge audit

5 November 2026 | PCC-20261105-e660a7 | Producer statement: unverified

Source custody

6 shared files; original source

52 original report paths

14 pinned archive hashes

Native controls

3 CLI tests in each consumer

33 older suite library tests

Tensor Clippy + locked graph

Claim standing

Original bodies unchanged

PCC standing: unverified

No signed execution verdict

Producer software/custody observations; independent execution evidence remains absent.

The public known-answer controls report 3 passing CLI tests in each of the crypto, cryptanalysis bindings and older suite entry points, plus 33 passing older suite library tests. Scoped strict tensor Clippy and the repaired genus-2 tool's locked dependency graph report passing. [pcc:unverified]

Read-only comparisons report that six shared files match both current copies and the published source; 26 original report paths in each implementation remain unchanged. All 14 receipt hashes match the reachable b7955c3d13834c076b7b345c44b4912bfdb03d4b archive. The archived journal is checked at that exact commit; its live copy has subsequent entries. [pcc:unverified]

Both original claim bodies remain unchanged and their standing is unverified with no signed verdicts. Ledger prefix/chain controls report passing against the merged commits. This report is not an independent signed execution verdict. [pcc:unverified]

Repository	Pinned main revision
crypto	2d33e9c068c0f2b3226893017c8ea48548cc0749
cryptanalysis	12d419499d1f2ba4a8380da58f139f0d0db11912
crypto-autoresearcher	b9c6c32a70d273a22355019b59ed897d6ad733eb

CI observations and preserved limits

Historical release transfer and autoresearcher record failures are retained; the pinned current-main release and record jobs report success. Crypto still has whole-repository Clippy, ephemeral-CLI and curve-naming failures at source paths unchanged by this integration. The report preserves these baseline failures; no gate or unrelated benchmark data was changed. [pcc:unverified]

Raw commands, exit codes, original failure logs and digests: checks/*.json and checks/*.txt.gz. Source comparisons: custody.json. API snapshots: ci-snapshot.json.gz. Source/reproduction notes: README.md. Host and toolchain: environment.json. No performance/isolation comparison is asserted.

Primary context: docs/structured-prime-ic.md, the original structured consumer reports, KN-OPEN-08ba7e and docs/SABOTAGE_RESISTANCE.md. The full constrained-summation-message requirement remains open. [pcc:unverified]
