p=37 full two-dimensional exact-oracle IC · A/A

Run ID: `run-20261022T0717Z-quartic-2d-p37-aa`. One target `[271]G`, 624 physical points, 52 folded factor columns. Fifty-three residual queries yielded 2,833,126 complete signed decompositions, rank 53, and verified scalar 271. An independent point-keyed signed-pair oracle replayed all queries and selected rows; the A/A non-timing diff is empty.

phase	F_p multiplications	group operations
model	859	0
base including axis relifts	2,567,679	0
input	4,741	46
eigenvalues	16,618	156
orbit map	1,877,044	17,524
full pair table	37,708,944	388,752
53-query stream	4,003,923,826	41,277,322
answer checks	2,004,307	18,854

Matrix: 369,021 modular row operations. Total L0 time 20251.65 ms is shared-host diagnostic only. Hash and allocator cost, polynomial S5 relation finding, matched rho and GAE pricing remain open. Full commands, source hashes, raw trace and independent audit are linked in `README.md`.
