## p=37 full two-dimensional exact-oracle IC

Run ID: `run-20261022T0717Z-quartic-2d-p37`. One target `[271]G`, 624 physical points, 52 folded factor columns. Fifty-three residual queries yielded 2,833,126 complete signed decompositions, rank 53, and verified scalar 271. An independent point-keyed signed-pair oracle replayed all queries and selected rows; the A/A non-timing diff is empty.

| phase | $F_p$ multiplications | group operations |
|---|---|---|
| model | 859 | 0 |
| base including axis relifts | 2,567,679 | 0 |
| input | 4,741 | 46 |
| eigenvalues | 16,618 | 156 |
| orbit map | 1,877,044 | 17,524 |
| full pair table | 37,708,944 | 388,752 |
| 53-query stream | 4,003,923,826 | 41,277,322 |
| answer checks | 2,004,307 | 18,854 |

Matrix: 369,021 modular row operations. Total L0 time 20232.07 ms is shared-host diagnostic only. Hash and allocator cost, polynomial S5 relation finding, matched rho and GAE pricing remain open. Full commands, source hashes, raw trace and independent audit are linked in `README.md`.
