Complete-DLP smoke: K0 over GF(2^{13})

Report date 2026-10-25; session `ECBS1hd3bc41fb2eb2`. All ten recorded answers verify and all ten deterministic replays reproduce.

Exact curve: `ICV1:f2m-13-752c6463:181:8012:0x1:-7:unk:r:515ee5696294`. Prime subgroup r=2003, cofactor 4, generator (0x12b9,0x1bc4). Two public known-answer one-target workloads, target seed 202610230101; one round, no warmup, alternate order, per-child timeout 900 seconds. Shared x86-64 host earns L0; elapsed times are diagnostic.

Arms: strong signed-Frobenius rho and its identical repeat; direct S4; symmetric product-space S4 with degree-two closure; generic three-summand MITM with negation folding. Every IC arm uses the same geometric factor base, seed 17. Frozen complete parameters are in the session spec/plan. The direct hybrid extraction has an input-degree floor, up to six.

Arm	verified/planned	recorded S at weights 0 / 0.1 / 1
ic-direct	2/2	19.57 / 7291 / 7.273e+04
ic-pair-table	2/2	54.28 / 58.25 / 93.89
ic-symmetric	2/2	19.47 / 2884 / 2.866e+04
rho-strong	2/2	14.33 / 14.55 / 16.55
rho-strong-aa	2/2	14.33 / 14.55 / 16.55

The graph quotes native ecbench band output, which re-prices recorded group and native counters. It omits incompletely counted construction and cubic splitting, and is not a complete-price comparison. No population interval is claimed from two targets. The displayed raw S in the original session includes a legacy wall-priced solver term; it is not admitted as a counted L0 measurement. The raw lower-bound flag does not mark these omissions. Automated pair ranks do not repair missing costs or censored runs.

Source pushed through a5ff7036; the sealed records pin the actual binary. The independent native audit reports 10 records, 10 verified, and 10 reproduced replays, zero audit problems. Same-host replay checks correctness and deterministic counts, not independent-host physical performance.

Raw sealed directory: `../../pipeline-runs/structured-n13-20261025-01/`. Native replay: `../../pipeline-receipts/structured-n13-20261025-01.json`; native band: `../../pipeline-receipts/structured-n13-band.json`. Plugin source: src/bin/ecbench/structured_s4.rs and structured_s4_math.rs. All original failures remain recorded. No full IC gain or rho crossover is promoted to the leaderboard or benchmark results table.
