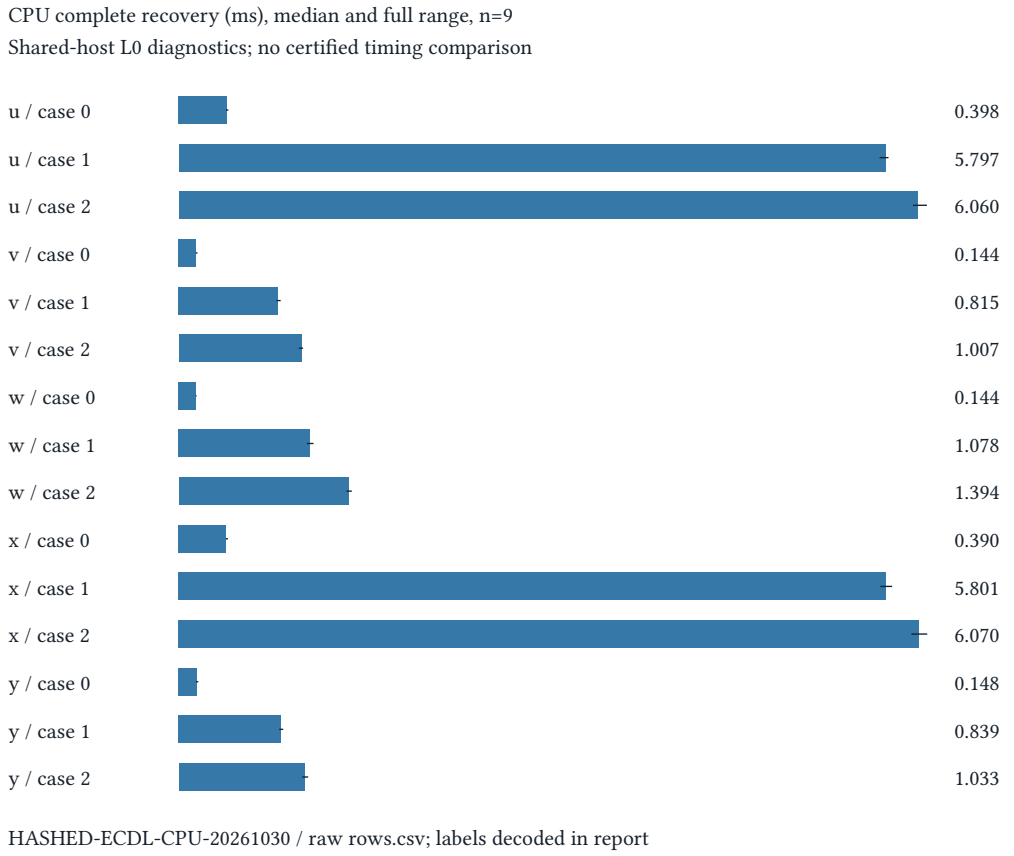
CPU combined reduction snapshot

Shared-host observations only; no certified speedup or hypothesis promotion. Job `hashed-ecdl-cpu-round15-20261030`, October 30, 2026 UTC.

Unapplied snapshots: combined candidate `9a05eb488405` plus frozen patch; reference y is profiling-only `fb3cb55f518a` plus its patch. Original baseline u/x: `2bd4588fba60`; combined v and batch1 w. Intel Xeon 6975P-C, one software thread, 2 vCPUs / 4 GiB reserved. Within-run comparisons only.

Fixture	Baseline u ms	Profile-only y ms	Combined v ms	y/v
8-bit / 3 slots	0.397709	0.147832	0.143688	1.029
16-bit / 3 slots	5.796725	0.838992	0.814772	1.030
16-bit / 4 slots	6.060122	1.032969	1.007229	1.026

Medians from nine measured repetitions after one warmup. Baseline u/v ratios: 2.768, 7.115, 6.017. The further 10x target remains unmet.



The combined snapshot disables unused internal clocks and reuses the collector's generated target when checking tuples. Full point/membership/affine-sum checks remain. The original relation checker and verifier are byte-identical; both complete certificate replays still independently recompute every target.

All 150 executions completed (135 measured,15 warmups). Full certificate bytes, scalar checks, replay and corrupted-scalar rejection pass. Setup, discarded trials, elimination, both checks and serialization remain charged. Launch, archive I/O and negative controls are excluded; external timers are unchanged.

All v/y ranges overlap. v ranges (ms): 0.140297–0.154517,0.801787–0.836947, 0.986422–1.020244; y: 0.143217–0.161480,0.824788–0.858150,1.014289–1.062496. No certified improvement. A/A x medians: 0.389588,5.801267,6.070398ms. Ratios are derived from measured medians. No cross-panel pooling.

The33-test snapshot passes strict Clippy and formatting. Export completeness and file-integrity checks pass. Both returned materialization manifests match their frozen copies. Effective source/patch hashes are recorded alongside the protocol. Integration, strict isolation, independent review, external/rho comparisons and larger-scale CPU recovery remain unresolved. Build layout/co-tenancy are nuisances. Protocol: `6518e8d6d988c3800c9791e16566a4ad8c7fd64058ddab5b2ff8f6103bc8791e`. Raw rows, certificates and checked export: `round15/results/`.
