Pencil gate: interim checkpoint 9 coverage

pencil-p186379-20261030-c1 · Running session · Recorded coverage, not performance

The three observed warmups include one pencil timeout. Missing slots are not failed observations.

All 36 cost-ratio cells remain null. Source counts and hashes: coverage-counts.json.

Pencil upper gate: interim checkpoint 9 observations

Run: pencil-p186379-20261030-c1. Caller-supplied source commit: 543a54b4b1c3be7052872af3ffe393a44c69a3c3.
Observations only. No statistical, speed, mathematical or timing qualification is inferred.
One public synthetic mathematical target at p=186379. Interim snapshot of a running computation; no complete measured comparison.
Workloads: 1; expected pairs per price cell: 5; slots: 18; observed: 4; missing: 14.

Recorded outcomes

pencil:timeout: 1
rho:verified: 2
rho_AA:verified: 1
Missing rows remain missing; capped, timeout, error and other outcomes retain their original labels. Counts from different epochs are not pooled.

Pair coverage by price cell

Workloads: 1; expected pairs per price cell: 5; slots: 18; observed: 4; missing: 14.

Arms: pencil, rho, rho_AA. Planned slots are not observations.

Fewer than two comparable ratio cells are present. Diagram of planned scope and observed progress; no performance plot.
Observations only. This is an interim checkpoint report, not terminal gate accounting, a mathematical verdict, or an algorithm ranking.
The versioned generation9 archive, manifest and selected session files passed hash/size checks. The embedded session remains running with a null final records digest.
Four of18 planned execution slots are retained: two control warmups report verified; pencil warmup reports timeout with watchdog expired and signal9; one rho measured round reports verified. Producer statuses are not independent scientific replay.
Fourteen planned slots remain absent in this checkpoint;14of15 measured slots are absent. No measured pencil row and no complete candidate/reference pair exist. All36 cost-ratio cells are null; absent work is not a zero-cost outcome.
All clocks remain unqualified. No fresh benchmark epoch or independent scientific replay is established by this packet.
All five required measured pairs remain unavailable.
Original scientific protocol version4 and unchanged source/binary/inputs govern data. Version5 only amends future same-request controller supervision. The six-hour budget,08:10:24 UTC scientific cutoff and11:17:54 UTC outer expiry are unchanged.
Controller and worker resource observations remain separate from finite algorithm counts. Execution is ongoing, so total active time and total spending remain unknown; prior failed attempts and costs remain separately retained.
Native canonical packaging and checking retain expected incompleteness findings. The final post-restoration check has five shortfall findings and no resource-binding error.
A resource metadata update raced packaging. Original exact bytes were restored; newer support is separately retained.
Neither raw scientific rows nor the frozen analysis changed.

Separate resource observations

No conversion to algorithm cost units.

{"accounting_notes":["Worker time continues across controller ownership changes; controller invocations are separately retained.","G9 includes a producer-recorded pencil warmup timeout; its raw rusage/status remain in the archived record, not converted to a complete algorithm cost.","No complete measured pair or independently replayed candidate exists in this snapshot.","No total active time or total spend is claimed while execution and terminal accounting remain incomplete.","Prior budgets and failed attempts remain separate, without refunds or pooled result rows."],"allocated_dollars":null,"allocation_and_algorithm_costs_distinct":true,"charged_categories":["candidate","rho","rho_AA","warmups","computation","fresh_epoch_if_any","independent_replay_if_any","recovery","failed_attempts"],"controller_amendment":{"path":"/home/ec2-user/crypto-pencil-signed-graph-20261029/research/pencil_large_prime_20261029/protocol_draft/replacement_upper_gate_20261030/protocol/controller-continuation-v5.json","sha256":"d00be8a9e4b12fd4e6bb60d3d6c423b9213850de1859e22e248b52cddf70c956"},"controller_build":"isolab-recovery-controller:592e9381-e505-48bc-a796-3d02c4d3a922","controller_continuation_admission":{"path":"/home/ec2-user/cr

All36 exact price cells

S2 is twice S/M; N10 is ten times the native event price. Incomplete/unavailable ratios are null, not zero. Partial admitted sums are retained in JSON as diagnostic only; no partial sum is promoted to a complete ratio.
