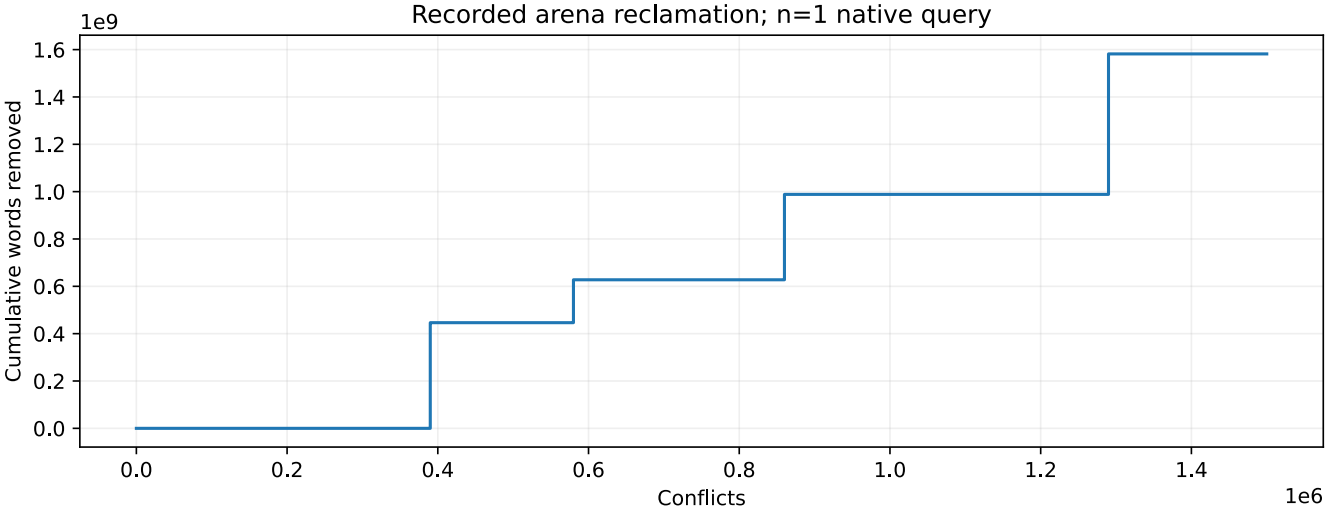
Native N83 K2048: 1.5M continuation

K2048-c3, source c13e33dc, worker8ab6f9cf, guardefa7c805. One public query, m5, public_x_hash, seed2026100801. Original pinned image and inputs; 8GiB/swap0, one CPU quota, reservation14/30, worker14. Exact ceilings: 1500000 conflicts /8957 worker seconds /10157 command seconds.

Native audit, memory custody and independent director checks pass. One command, one attempt, exit0, no timeout; command5325.486226592seconds is diagnostic accounting, not an algorithm-speed comparison. Bounded Unknown; zero models, relations and rank. All1001 original search signatures through1M agree; later search signatures remain unpaired. All152 storage snapshots validate.



Four reclamations, cumulative1581835327words removed. Terminal owned capacities 3224572539bytes; arena capacity2852640992, used1442549336; worker RSS1990930432, HWM3157737472. Capacities, logical usage, allocator and RSS stay separate. Memory samples, events, gaps and unsampled tail are explicit in data/memory.json; a sampled peak is not asserted to be the exact full-run peak. n=1, no uncertainty.

Sources: REPORT.md; data/reclamation.json; data/memory.json; data/director-assessment.json. Complete raw/card/prompt/binds/source/relay/receipt and all readiness refusals go to setec-astronomy-artifacts via PUBLICATION.md and store/index.json. Earlier c1/c2 failures are preserved, conservatively charged 13+30 within the original9000 slot; no new allowance or automatic retry. No useful relation, UNSAT, recovery, base winner, minimum memory, speed or rho claim. K4096 remains open. Canonical graphs are unchanged; no eligible leaderboard/benchmark row. Documentary copies are in benchmarks/20261023-n83-arena-reclamation.
