Binary Semaev m=2 Weil descent
first fall degree = 2 (proved, every n)
upper bound k+2 (proved)
last fall, random V (exact)
last fall, polynomial V (exact)
certified lower bound (1 not in W_4)
degree
n (field F_{2^n}, k = ceil(n/2))
Prime-field Kummer tower, m=2 (PKM)
last fall d_F, ours (session-reported; raw data lost)
PKM 2016 Table 4: corrected D_reg
first fall degree = 4 (proved, t >= 2)
certificate degree 2t+2 (proved)
tower height t (factor base mu_{2^t})
