First full native run: successful, receipt label corrected

cm8-dual-20261029

The first complete native contract passes14+14points,392addition pairs,7subgroup inverses,all12S3arms/72recoveries,9changed/rehashed controls and22backend tests. The receipt originally named rejected valid points “nontorsion”. All finite group points are torsion; the actual seven points are not killed by7. Source correction changes only that JSON key, with full second replay. Original source and successful output remain. This first run is not a failure and is not erased. No timing, useful-yield change or total-cost gain was admitted.

Full report: `reports/cm8-dual-20261029/README.md`. Exact command/source/logs: `validation/cm8-dual-20261029/restore-runs.sh`. Existing local resources, 600sec caps, no paid compute, no new general geometric-duality/speed claim.
