R107: four normalized places above x=1

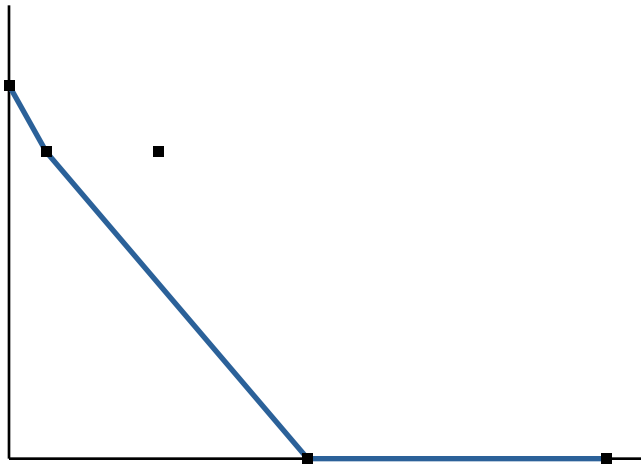
5 November 2026 | marked-23 Koblitz degree-112 source field

Exact u-coefficient orders: y=0 [28,23,23,0,0]; y=1 [27,23,23,0,0].

Both polygons have a length-1 edge and a coprime-slope length-7 edge.

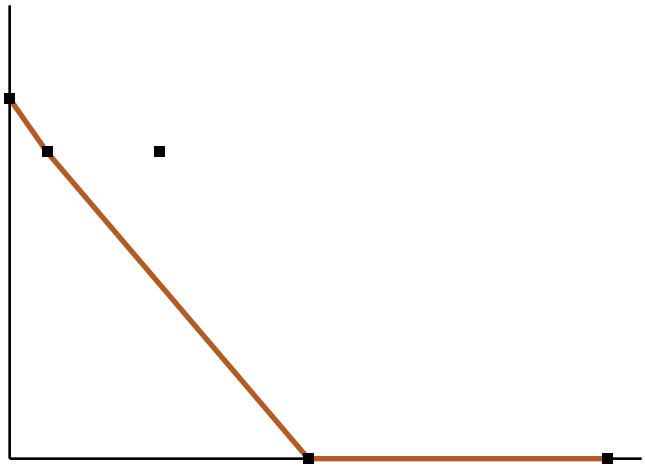
Two F4-residue places lie over each base place: t-ramification 3,21,4,28.

y=0: slope 5, 23/7



u exponents 0,1,4,8,16

y=1: slope 4, 23/7



u exponents 0,1,4,8,16

Fresh replay, changed-hash rejection, independent Hasse composition,

and Lean hull/degree arithmetic checked the result.

Next: actual N51 valuation on degree-1 and degree-7 branches.
