Qualified arithmetic inputs
n >= 2; 2^(7n) <= q
Explicit geometric lower estimate
Actual F4 = F2[alpha], alpha²+alpha+1=0
y²+y=x³+alpha; discriminant1
Actual rational point count1
Checked power / square-root estimates
Error <= (q+1)/2
Therefore q+1 <= 2N
Checked Möbius chart alpha+1/x
O maps to alpha outside the base chart
Actual factor base empty: 0 < 3/2
Scopes remain explicit
Small field violates the size hypothesis
Qualified ramification / genus bridge still open
