R108: base series extended to s^128

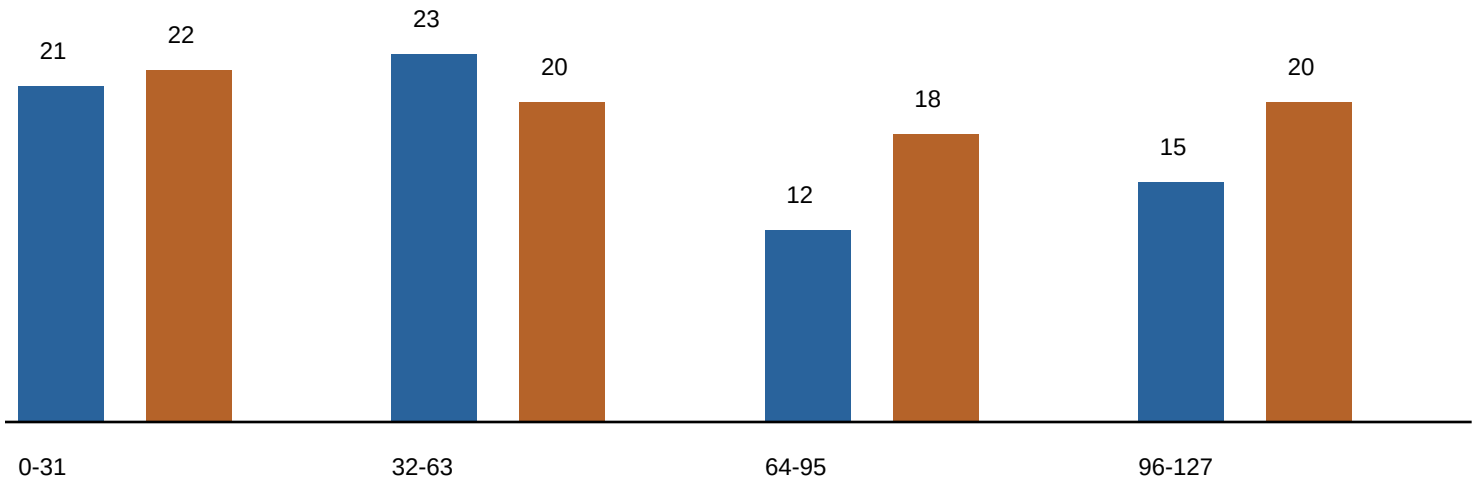
5 November 2026 | marked-23 Koblitz local series

Both original f residuals vanish modulo s^128; all first 32 bits match R106.

The recorded z(s) supports contain 71 and 80 nonzero coefficients.

R102 denominator orders pull back to at most 27 or 36 in s.

Nonzero z(s) coefficients by 32-degree window



Blue: y=0. Orange: y=1. Counted from exact result JSON.

Fresh replay, changed hash, independent bit arithmetic, and Lean passed.

Next: N51 valuation on degree-1 and degree-7 lambda branches.
