Every t: F3, g=12t+2, n=24t+5, f=X^n+1
Actual monicity, degree 2g+1 and separability
Identity plus (X^d, ±1), 1≤d≤g
n distinct pairs, all smooth
All valid reduced polynomial pairs
Finite via injective coefficient encoding
Full gcd / Bézout / composition / remainder certificates
Five phases of addition by (X,1), at most one reduction
Unique normalized polynomial output
Actual step defined by its unique output
Conjugate to increment modulo n
Return after j steps iff n divides j
Uniform valid nonsmooth pair
(X²+X+2, X), outside the cycle
Every t: cycle smooth fraction 1, ambient fraction < 1
Direct universal cycle-equality negation
Unbounded genus and exact period
91 declarations pass, 0 failing / 0 trusted-native
All-pair ambient group law and geometric Picard bridge open
Known torsion family; no typical-subgroup asymptotic claim
Local proof checking; signed standing unverified
