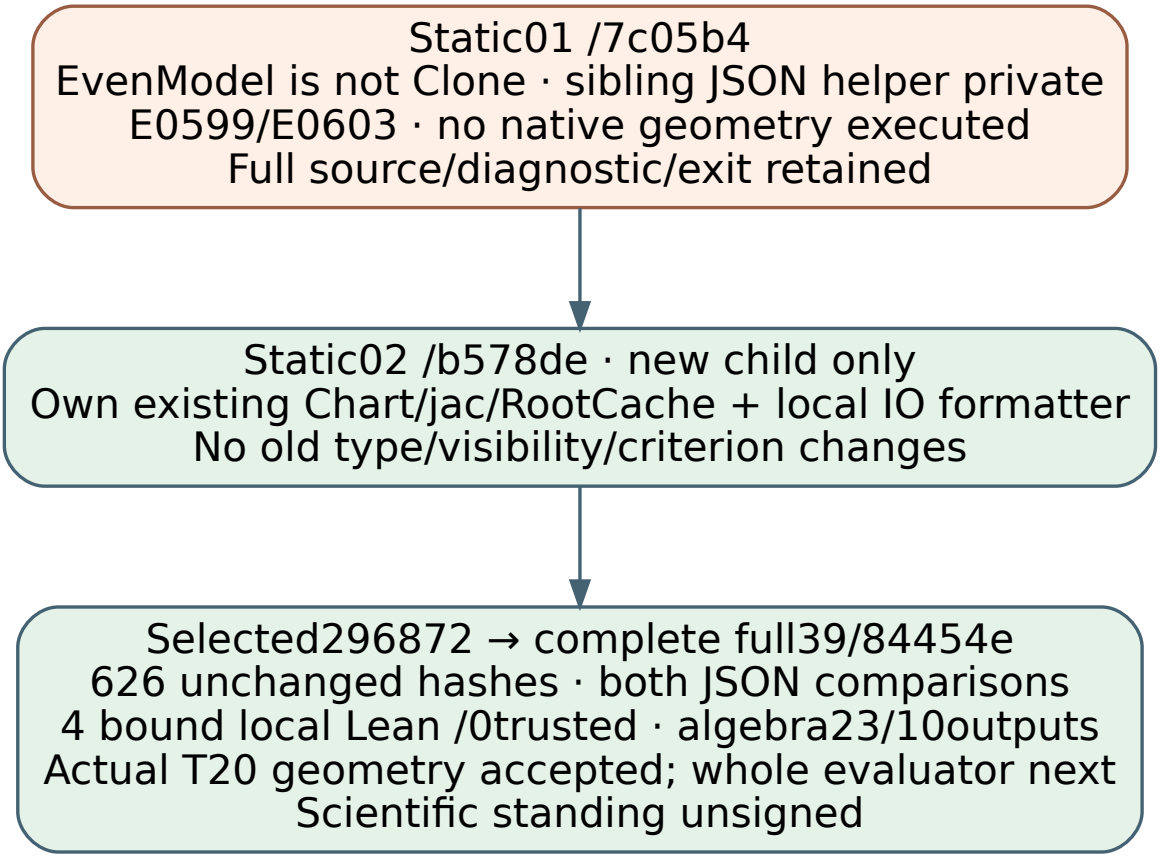
## Retained T20 static01 compile failure

2026-11-12 · geometry phaseA · original criteria preserved · unsigned



Actual compile failure and new-child-only correction. LocalLinuxx86_64 development checks,no benchmark isolation or timing comparison. Scientific standing remains unsigned. [pcc:unverified]

### Failure before native execution

Static01/7c05b4 assumes EvenModel is Clone and calls a private sibling json_point helper. Rust E0599/E0603 reject those calls. Complete original source/registration/diagnostic/exit is retained in t20-static-failed-01. The geometry test did not execute;no mathematical result is inferred. [pcc:unverified]

### Corrected scope and complete acceptance

Static02/b578de constructs its own existing Chart/legacy Jacobian/RootCache and uses a local metadata JSON formatter. No accepted old type,visibility, arithmetic or criterion changes. Selected296872 is diagnostic1/38filtered; full39/84454e passes zero failed/ignored/ filtered,oldguards/fmt/strictClippy, all626 source hashes and both6141/24475-byte certificate comparisons. The actual kernel/raw target/counts satisfy the frozen protocol unchanged. [pcc:unverified]

Four bound local Lean passes give192written38modules/0trusted;algebra23/ 10outputs/all13 hashes leaves all8 old outputs byte-identical. Written b24be8 states the actual BD twist/AV/Picard bridges. Proper whole-Mumford execution is next phaseB. No native mathematical prediction failed,no paid run or benchmark occurred,and no scientific signature or history rewrite is claimed. REPORT.md links source,evidence,main report and the editable diagram/renderer/Typst/PDF. [pcc:unverified]
