Component progress: proofs, software and continuation

Same-support mixed branch. SameUComposition and WordSameU both have sealed independent scoped reviews. The field composition derives valid extracted and doubled outputs from original valid inputs, crossed guards, nonzero weights, polynomial coprimality and characteristic not two. The UInt64 extension follows literal expression and restricted dispatch order under prime $5 \leq p < 2^{31}$, canonical words and degree-one/no-table arithmetic. The word review checked 82 bindings, five final checks and four additional boundary assertions. Prior failed attempts remain retained. No compiler, counter or full group-law claim follows.

Corrected-source software. Commit 3c592af passed all four recorded checks: eight touched GPU tests; 5793 library tests with 128 ignored; maintained Clippy; and ecbench build. Terminal checks span 02:36–03:16UTC. The earlier full-library exit 101 remains separately retained.

Final static binary. The final build completed at 03:23:52UTC with exit 0 and digest d0e2d142.... The separate provenance review joins exact source, binary and link evidence. Bundled musl upstream revision remains unestablished. Root assembly stopped: the base Docker client exited 0, then reading its sudo-created IID file raised PermissionError. Exact-tag readback found the base image; runtime assembly has not run. Reconciliation must precede adoption; no duplicate base build is implied. Runtime qualification remains pending.

Continuation. Nine plan hashes and 24 retained source hashes match. Enrollment remains 1260 targets, 22680 slots and 3780 warmups, plus a separate 18-slot gate. The planning cap is 25200 worker seconds through 2026-10-31 06:00UTC. Remaining budget and live recovery-owner closure remain null/unresolved. The compatible state-read gap is retained.

C1 still has seven records, four measured, two pencil timeouts and eleven missing slots. No new cohort observations or ratios are supplied. The machine-readable index binds exact receipts and links the 19-field continuation ledger. All original failures and earlier reports remain available.
