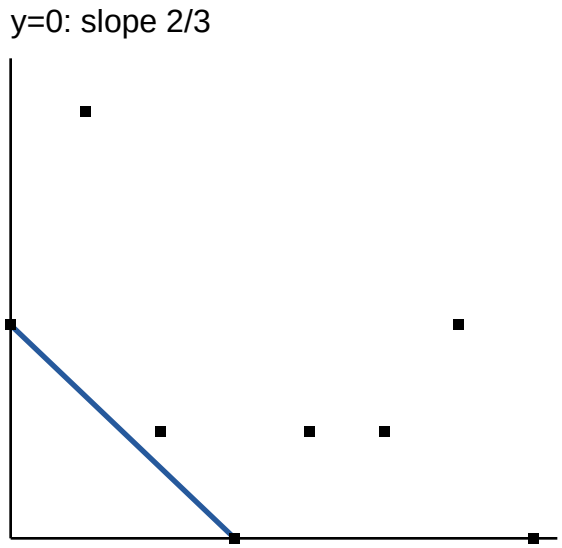
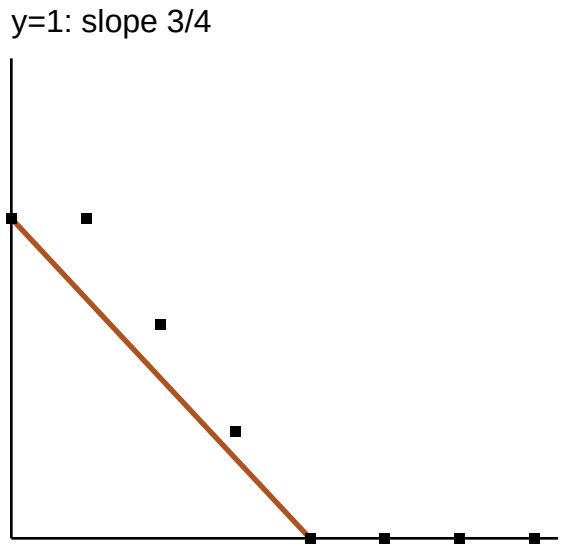
R105: x=1 Hasse jets and base Newton edges

5 November 2026 | marked-23 Koblitz source-order experiment

The exact f51 donor gives local Newton edges (0,2)-(3,0) near y=0
and (0,3)-(4,0) near y=1. The slopes are 2/3 and 3/4.
The full G51 jets at orders 1, 2 and 3 vanish. Its order-4 term is
y^3(y+1)^3 l(l+1)(l^2+l+1); endpoint evaluation hides it.





Fresh replay matched exactly; a changed donor was rejected.
Independent bit arithmetic and Lean checked the displayed data.
The degree-112 lambda branch structure remains to be normalized.
