Software fixture only

Run: fixture_not_a_run. Caller-supplied source commit: fixture.
Observations only. No statistical, speed, mathematical or timing qualification is inferred.
Synthetic renderer test; zero solver executions
Workloads: 1; expected pairs per price cell: 5; slots: 18; observed: 0; missing: 18.

Recorded outcomes

No observed outcome rows.
Missing rows remain missing; capped, timeout, error and other outcomes retain their original labels. Counts from different epochs are not pooled.

Pair coverage by price cell

Workloads: 1; expected pairs per price cell: 5; slots: 18; observed: 0; missing: 18.

Arms: pencil, rho, rho_AA. Planned slots are not observations.

Fewer than two comparable ratio cells are present. Diagram of planned scope and observed progress; no performance plot.
No empirical result. Fixture numbers only.

All36 exact price cells

S2 is twice S/M; N10 is ten times the native event price. Incomplete/unavailable ratios are null, not zero. Partial admitted sums are retained in JSON as diagnostic only; no partial sum is promoted to a complete ratio.

Cell	S2/I/N10	Admitted/expected	Method/rho exact	With calibration/rho exact
