Supplied monic F,H and Bezout data
UF+V(fH)=1; 0<deg H; deg H+1<deg F
Bounded CRT reconstruction
Top-coefficient reciprocity
Actual weighted remainder relation
mu(fR) = -coeff_top(RU mod H)
Full polynomial block radical
Exactly (cF,dH) over any field
Abstract branch-test lemma
Nonzero branch on a right-radical vector
prevents extra restricted radical vectors
separate proof obligations
Still to assemble: actual coefficient matrix,
pencil membership and branch intersection
Then public-input finder and search cost
