Exact degree-peeling pencil: nine paired curves

run-20261022T0534Z | p=739 prior gate; eight new curves

Every row: 60 source-verified candidate/rho solves and all 36 prices.

p	peel/online	peel/rho	below online	below rho
739	0.898244	11.615357	24/36	0/36
1151	0.796603	22.836038	24/36	0/36
1187	0.736053	22.877204	24/36	0/36
3371	0.379821	93.480568	24/36	0/36
3527	0.393296	105.157423	24/36	0/36
3931	0.365357	121.367036	24/36	0/36
11731	0.278124	1204.654657	24/36	0/36
11887	0.282829	1090.655477	24/36	0/36
12143	0.269806	1146.700226	24/36	0/36

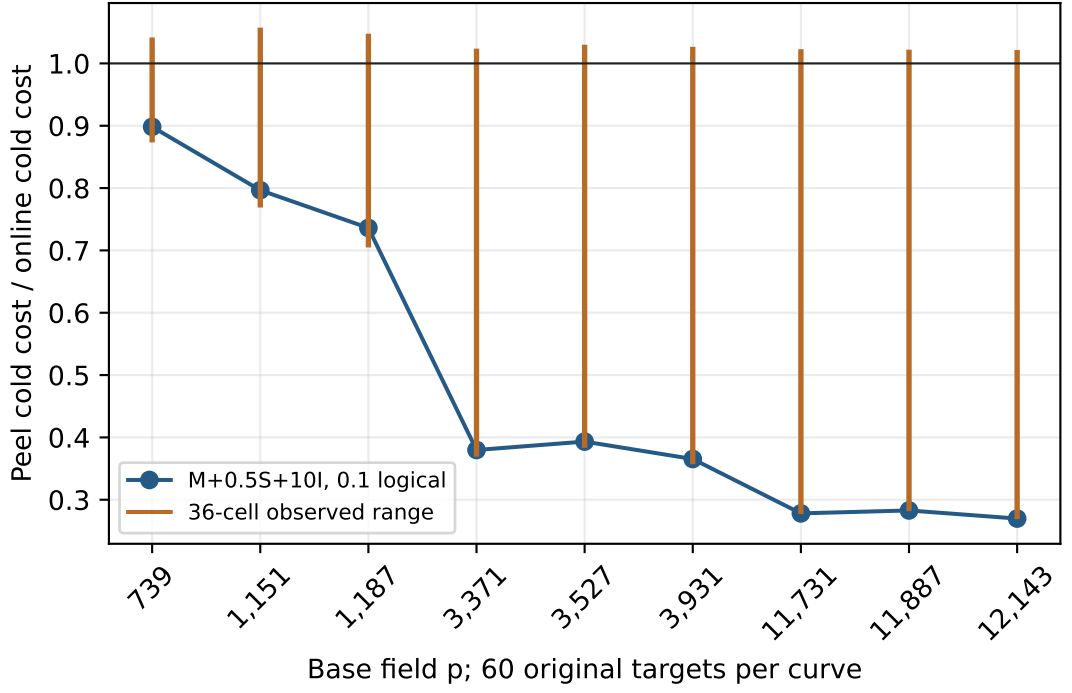
All values are complete cold operation prices, not wall-time ratios.

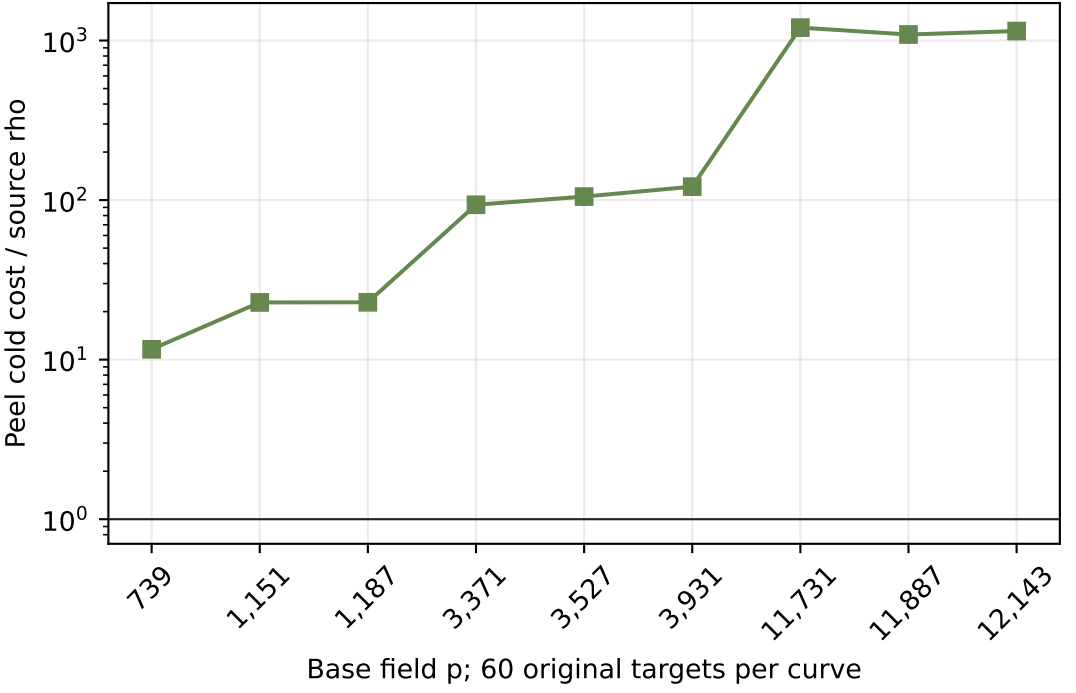
Each field size retains both lower and higher pricing cells.

The 28- and 32-bit pencil targets are separate, partial runs.

Source: per-target JSONL, 36-cell price grid and native validator.

Exact degree-peeling pencil collector: nine paired curves





run-20261022T0534Z · p=739 prior gate shown for context · full 36-cell band retained · wall time excluded
