Dense same-residual 2D oracle IC · p=13 · A/A

Run ID: `run-20261022T0730Z-quartic-2d-dense-p13-aa`. One target `[271]G`. 561 exact signed decompositions of the first residual; unanchored rank 6 of 7. The public generator log fixes one column, leaving 6 unknowns. 6 accepted rows from the first 6 decompositions gave full anchored rank and scalar 271. Independent signed-pair and all-log replay passed; non-timing A/A diff empty.

phase	F_p multiplications	group operations
model	650	0
base	216,201	0
input	3,560	35
eigenvalues	6,478	62
orbit map	149,262	1,422
full pair table	495,864	5,112
one-query stream	1,011,390	10,430
answer checks	162,265	1,548

Counted totals, previous ⟶ dense: 8,096,696 ⟶ 2,045,670 F_p multiplications; 81,076 ⟶ 18,609 group operations; 7 ⟶ 1 residuals. Matrix row operations are a separate unit. This exact group-oracle result does not price polynomial relation finding, hash CPU or a matched rho band. Raw records, commands and source hashes are in `README.md`.
