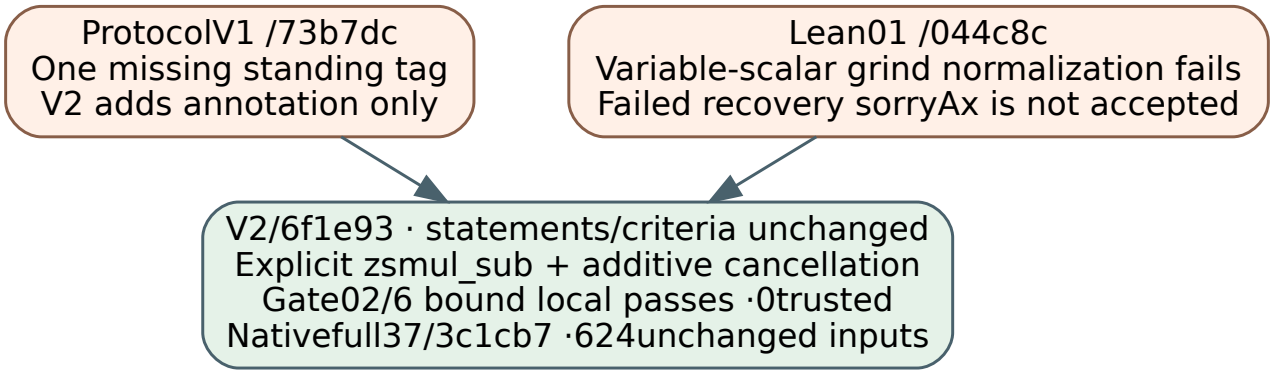
Retained protocol and proof failures

2026-11-12 · generic even-Jacobian component · unsigned records



Actual failure causes and corrections,not timing comparisons. Both failed versions,diagnostics,status and custody remain separate. No native mathematical prediction failed in this component. [pcc:unverified]

ProtocolV1 /73b7dc

The prose gate reports one missing standing tag. A shell invocation continued and created the record before handling that lint failure. PreserveV1;newV2/6f1e93 adds that annotation only before any new adapter code or native execution. All predictions,resource bounds and acceptance criteria remain identical. Actual lint outputs remain preserved. [pcc:unverified]

Formal01 /044c8c

The module build fails at frobenius_basepoint_rebasing because grind linarith cannot normalize arbitrary integer-scalar terms across subtraction. The failed compiler recovery prints sorryAx;the module has zero accepted audit declarations and is not promoted. Fullsource/build/gate/status/ hash custody is in evidence/even-lean-failed-01. [pcc:unverified]

Corrected proof and accepted scope

Use IntModule.zsmul_sub explicitly,then additive cancellation. No statement or hypothesis changes. Corrected gate02 and all six exact bindings locally pass,zero trusted native;project183written36modules. Actual AV/Picard/ globaldegree/field bridges remain written/ native. Local acceptance is not an independent scientific signature. [pcc:unverified]

Full37/3c1cb7 passes all native tests and624 afterhashes,with oldguards/fmt/ strictClippy preserved. This is separate from failed proof/prose versions. Geometric kernel stageC and new own-head CI remain open. GitHub tree-API 422/502 failures and exact-commit recovery are separately retained in512551. No history rewrite,criteria relaxation,paidrun or benchmark occurred. [pcc:unverified]

REPORT.md and the main reports/even-whole-maps/REPORT.md link full sources, all retained attempts and editable rendering files. [pcc:unverified]
