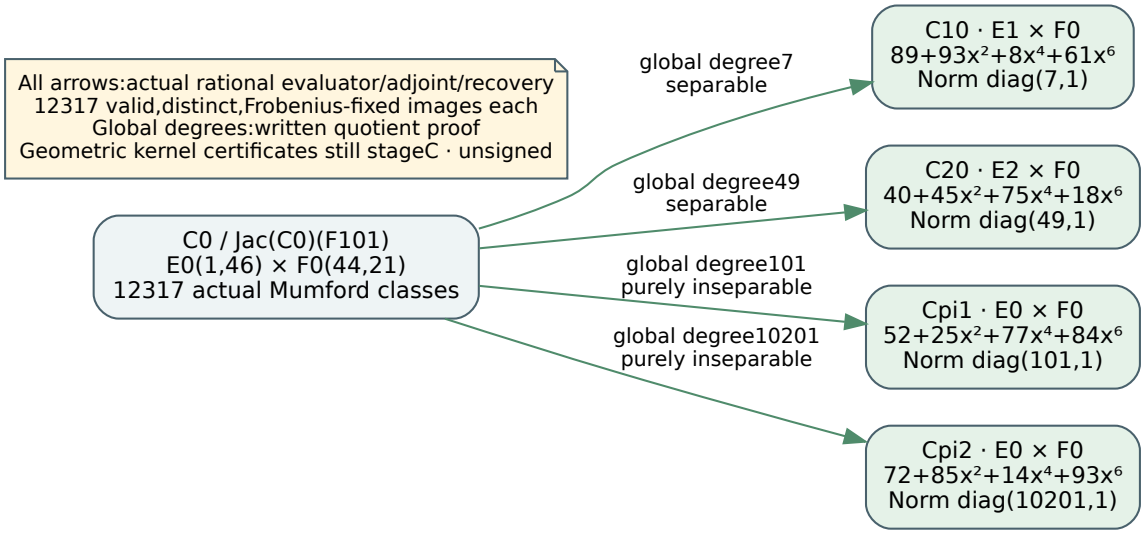
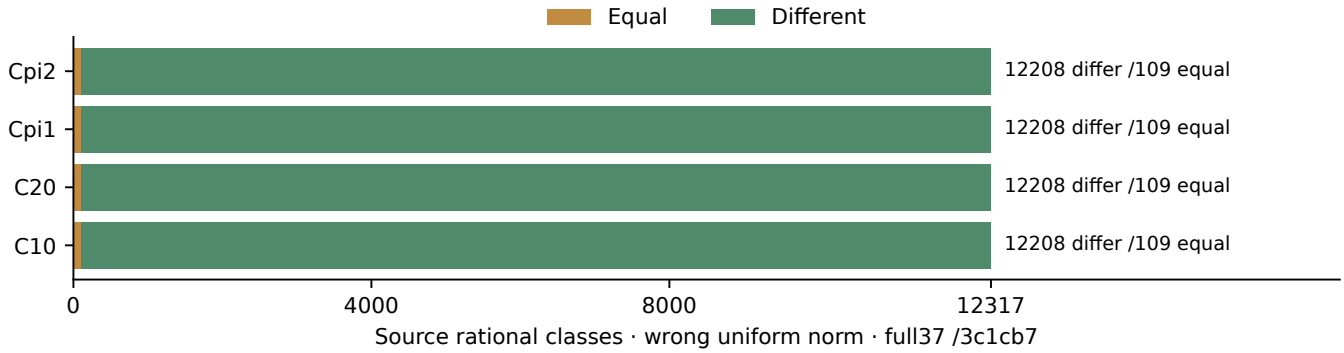
Four whole rational Jacobian transfers

2026-11-12 · full37 · four complete12317-class target corpora · unsigned

Complete37 native tests pass,zero failed/ignored/filtered;oldguards,fmt, strictClippy and all624 source hashes pass. Full02/3c1cb7 retains whole124139 bytes→standardXZ10952,source/status/hash/exactroundtrip. Selected78a854 is diagnostic1/36filtered. Scientific standing remains unsigned. [pcc:unverified]



Actual F101 rational evaluators,adjoints and recovery on every source class. Global degree/separability follows written kernel/quotient proof128eb1/d67ccf; geometric7/49 kernel certificates are a separate stageC. All four target presentations remain inside the fixed72-Jacobian catalog. [pcc:unverified]



Recorded complete-corpus controls,no sampling uncertainty. Every wrong uniform norm differs on12208 and agrees on109 inputs,matching the preregistered prediction. Actual norms preserve the F113 factor unchanged. [pcc:unverified]

Every target has12317 distinct valid Frobenius-fixed outputs,exact expected product images,actual adjoint norms and inverse recovery. Every identity, negation and translation by both generators passes;all109/113 embedded DLP scalar images retain their injective orders. The evaluator sees only Mumford inputs and public arithmetic;product labels are test witnesses. Lazy caches use actual Mumford/point coordinates,not output indices or logs. [pcc:unverified]

Chart,proper norms and the actual chain

Choose W=(r,0),L=f′(r),rho²=c6. The existing transform w=L/(x-r),z=y*w³/L gives a monic quintic. Signed sextic infinities become (0,±L²rho);the old monic constructor delegates withrho1. No retwist is used. The generic adapter retains origins,repeatedx0,ramifiedcorners and signed infinity fibres. All16 geometric4-pulls are distinct;all256 sums and annihilation by4 hold per factor,with actual4-point graph kernel and H*P2/cross0. [pcc:unverified]

Proper norms decode every Mumford support point with multiplicity and subtractdegree*cover(W). Actual Frobenius decodes the original sextic and rebases byW^pi-W. Degree-one omitted-basepoint mutants have120 witnesses per factor forC0/Cpi1 and122 forC10/C20/Cpi2;degree2 alone can hide that mistake. Full37 includes every earlier35 test plus adapter and whole-map checks. [pcc:unverified]

Global[2]F=Ptarget*factor*Hsource identifies the rational algorithm by public halves55/57. Actual7/49 normalized duals use scale29;Frobenius adjoints useV=[101] on rational factor points only. Public E109 norm inverses78/89/68/46 recover every source class;F113 is unchanged. EVEN_JACOBIAN_MAP_PROOF.md/ afd164 gives all written bridges. [pcc:unverified]

The actual divisor chainC0→Cpi1→Cpi2→C0 returns every input;the optional E-negative version equals actual Cantor[6103] on all12317 classes. Both partial-Frobenius cases satisfy[2]F=PtargetHsource on every class. The existing direct bridge already has identity factor stage and preserves the odd-prime logarithm;no further factor-evaluation saving is established. Complete construction/transfer/solver/recovery costs remain unmeasured. [pcc:unverified]

Six faithful local formal additions

EvenJacobian.nonmonic_infinity_square/2ac389, degree_two_basepoint_cancels/636360,degree_one_omission_detected/88bf4f, frobenius_basepoint_rebasing/324cb4,public_unbalanced_norm_inverses/7908b9 and uniform_mutant_coordinates/8ba779 are exactly bound local passes. Gate02six/0trusted;project183written36modules. Newbulk209compiled is expected,not ownCI-observed. Actual curves/Picard/globalquotients/degree/ fieldrealization remain written/native. Seven old algebra outputs remain unchanged. [pcc:unverified]

Formal01/044c8c and protocolV1/73b7dc standing failure remain immutable in a separate report. Gate02 uses explicit scalar distribution with unchanged statement/hypotheses;no failed compiler-recovery sorryAx is accepted. V2/6f1e93 fixes only a standing tag before native code. [pcc:unverified]

Sources:oldIndependentMapChart/propernormproof,Bruin–Doerksen0902.3480 Lemmas2.4/2.6,Milne Picard/ isogeny theory and unchanged native engines. KB/wrapper/atlas unavailable;exact-source fallback,no novelty inference. Rust1.99.1/Lean4.35.0;focused locked/offline tests/guards/fmt/strictClippy and36 proof modules reproduce this scope.
