A twist-derived endomorphism acts on the source generator

Source E(F827): 823 points

α = (π + [1]) / [7]

α(P) = [353]P; inverse [415]

Scalar action order: 274

Generic degree17 norm and Frobenius identities

Twist: 833 rational points

Kernel size: 17

Image size: 49

All image points are killed by7

Twist17-kernel → Vélu → source isomorphism

Complete finite point checks (exact counts; no statistical uncertainty)

Native exact rational maps and independent PARI agree. One public toy curve.

Known endomorphism theory; no unknown-log, timing or IC speed claim. Run: endo-v1
