Same-u local nonsingularity: independent review

Zero extracted ordinate → square factor of curve polynomial

Square factor → value(x)=0 and explicit derivative(x)=0

Explicit local condition → nonzero raw ordinate

Extraction + reviewed doubling → nonzero weights and validity

Four lemmas; fresh main/controls/readback all exit 0

Nonzero repeated-root and simple-root reviewer controls pass

Imported extraction/Doubling authorship disclosed

No global squarefree, word, compiler, counter or class-sum claim
