One target + explicit seed
Cold per-target trace pool; no known logarithm
Sample / retain labeled base
Unequal profiles; capped partial draws retained
Literal search cells
Coordinate guesses OR nonhorizontal chart + horizontal cell
Retained growth control
Full region OR certified first-new-coordinate frontier
F4 + exact roots
Learn / replay + numerical checks / fallback
One shared deadline; all attempts retained
Signed point relation + nonzero B
Scalar recovery and ordinary-residue checks
Sealed output
Literal equations, cells, coverage, counters, partial/failure states
Separate ordinary-residue reader
Witness + bounded complete-set oracle
Full / frontier / partial classifications
Optional inclusive Ir evidence
Matching replay + every method part
+ separate scalar-check frame
Native unified export
Every planned/observed outcome retained
Missing required evidence blocks qualification
source consistency alone is insufficient
Performance admission still pending
Successful approved source checkpoint + pilot
Frozen held-out protocol + accounting/replay + EKS gates
