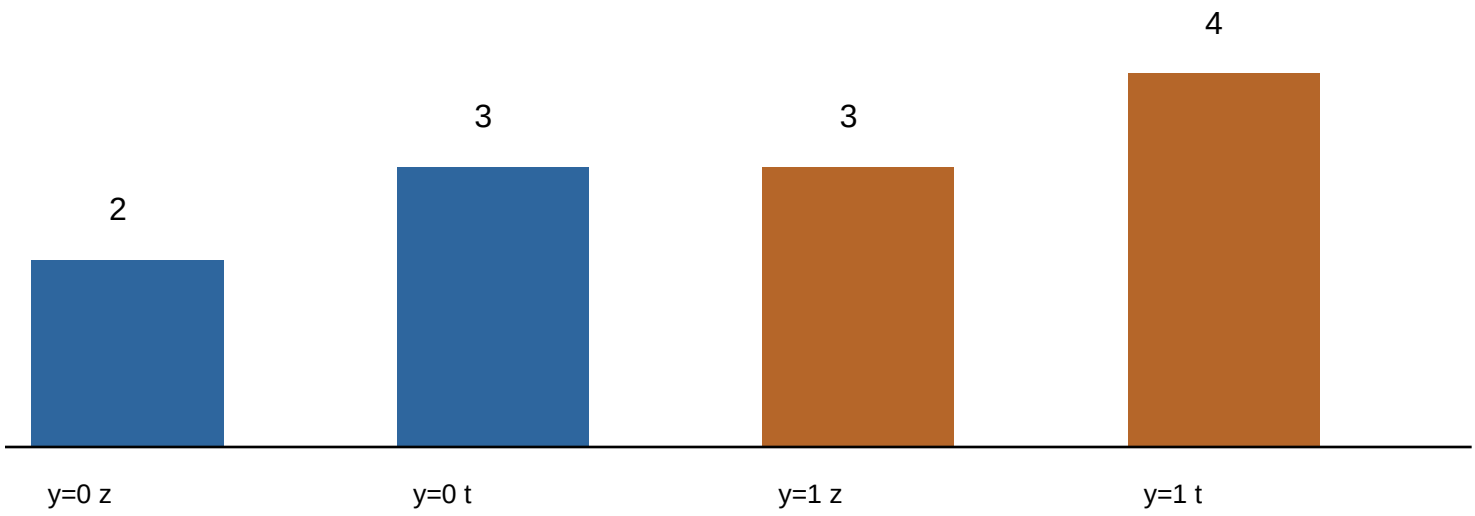
R106: base local uniformizers at x=1

5 November 2026 | marked-23 Koblitz source-order experiment

Set t=x+1 and z=y or y+1. Then s=t/z gives a simple-root transformed equation in both base completions. Hensel lifting constructs z(s); the source equation vanishes through s^32.

Verified valuations in the two base completions



Fresh replay matched; changed R105 hash rejected.

Independent bit evaluator and Lean checked both residuals.

Next: substitute the base series into full G51 and N51.
