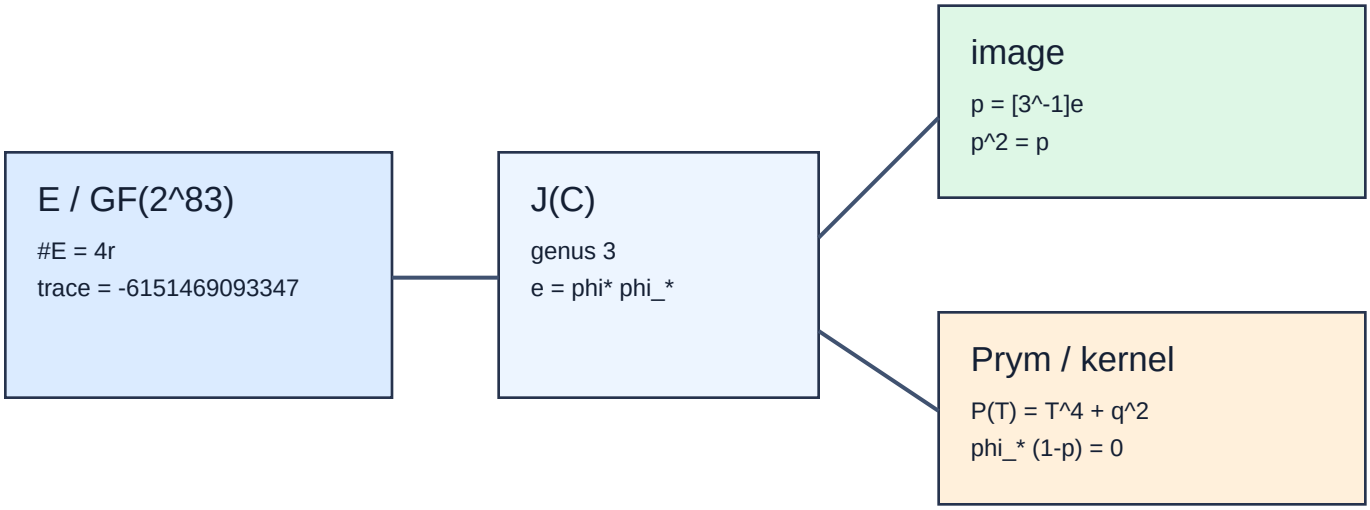
n=83 Jacobian norm and image projector

Exact structural audit; no discrete-log speedup claim



trace +2^42 factor

order 967140655691263535113830 5

gcd(order,r) = 1

trace -2^42 factor

order 967140655692143144416051 3

gcd(order,r) = 1

No shared r and no source-isogenous elliptic factor

Prym order = q^2 + 1; gcd with r is exactly one

Evidence

- General norm handles split and nonsplit Mumford support.
- 486 GF(8) classes cross-check an independent presentation.
- 236,196 ordered GF(8) pairs retain the homomorphism gate.
- Small-field counts: #E=#C=4,8,4 over GF(2),GF(4),GF(8).
- Formal source proves e^2=[3]e and the Prym factor expansion.

research/n83_jacobian_projector_20261031/RESULTS.md

Native and CI replay remain the execution gate after the session runtime disconnected.
