E/F43: y²=x³+x
P=(31,18), order 11
Prefix base: (4,5),(13,19)
First target: rank 0, closure 6
φ(x,y)=(41x,11y)
Lean: additive, injective; scalar equivalence
Twist T/F43: Y²=X³+4X
U=(24,26), order 11
Prefix base: (15,9),(17,6)
First target: rank 2, closure 4
equal homogeneous regularity
φ inverse on factor base
Lean relation sets + native degree replay
Same E/F43
Pulled-back base: (14,36),(13,24)
First target: rank 2, closure 4
Same exact coefficient sets
Both leading ideals: <x²y²,x²,y²>
Homogeneous first-zero degree 3
No runtime / uniform advantage established
