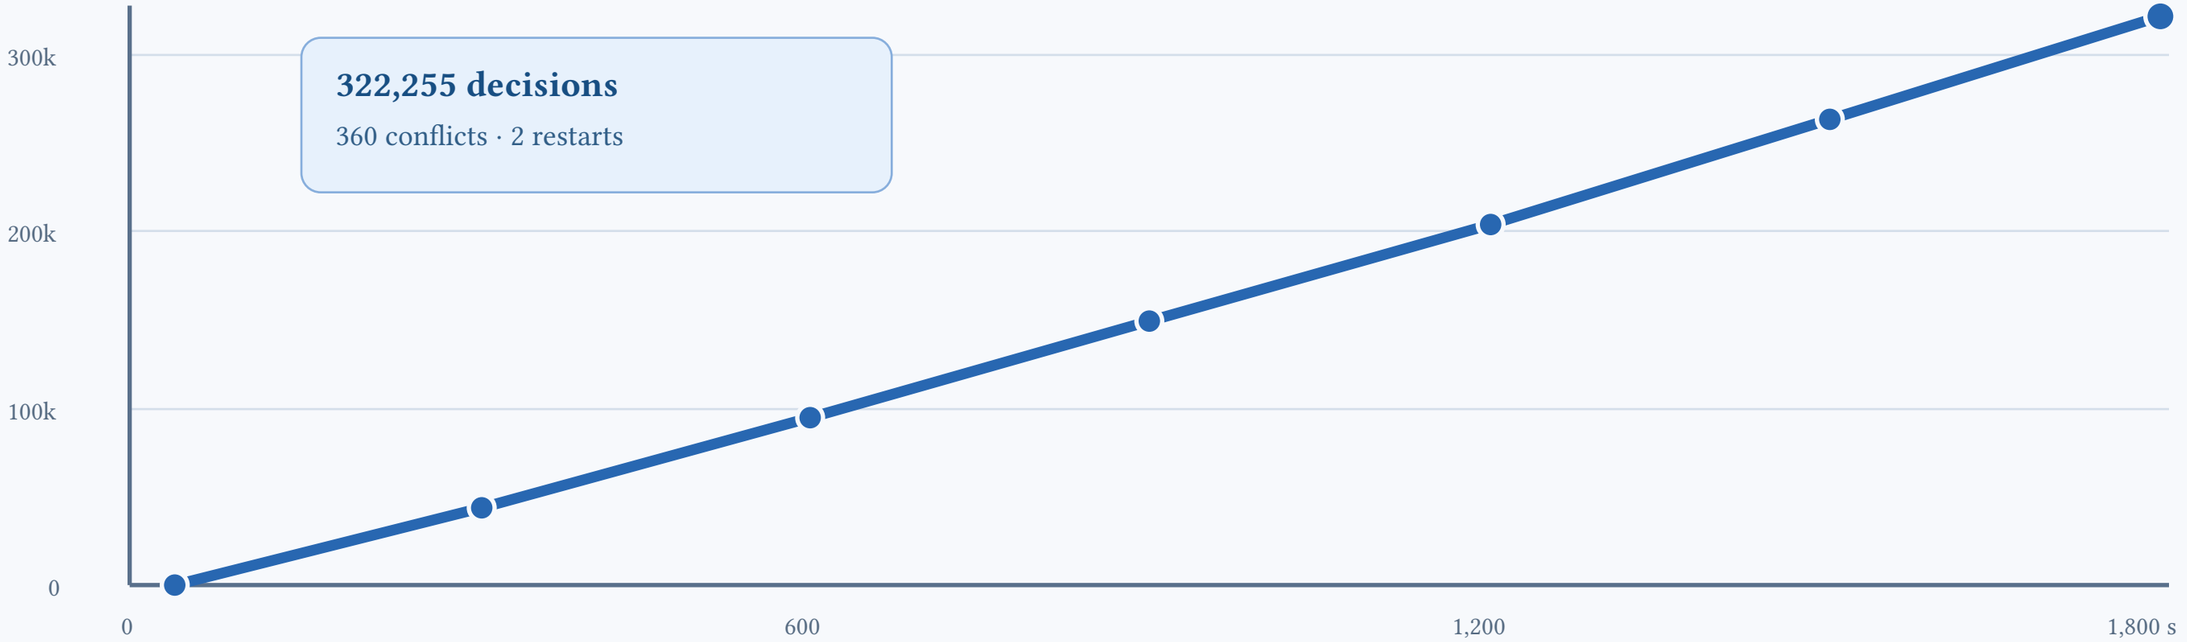
N83 prebuilt base · post-root search progress

Exact K=16,627 signed-Frobenius object · m=4 · seven x blocks pinned · one CPU, hard 4 GiB

Root: Fixpoint in 199.978 ms

SAT entered at 39.624 s · full orbit model: 201,598 variables, 5,915,238 clauses, 3,901 XOR rows

Completed decisions at durable progress samples



175/175 periodic snapshots: XOR propagation · container exit 124, no OOM

UNKNOWN_wall_cap; work after last sample, SAT result, group lift and natural useful rank remain unknown.

Source: frozen PROTOCOL.md; positive/worker.json.progress.jsonl, positive/container-state.json and positive/outcome.json. Anchor points are exact retained samples; polyline interpolates only for display.
