Frozen four-variable reduced.ms
Existing native 25-row source binding
Explicit pole-scaled target-completed family
Exact norm division; scaled curve equation
Proposed weighted initial-form binding
Weights (4,2,3,1); exact map pending
specialize at 1
specialize at 0
not established by endpoint identities
Actual symbolic norm / Dickson model
e = 1 endpoint; Lean exact
e = 0 endpoint: U* and X^16 mod U*
Lean exact; coefficients 1..4 suffice
PCC-20261113-7b7707 (unsigned)
Four remainder coefficients vanish
=> U* divides X^16 => U* = X^5
=> a1 = c0 = a2 = c1 = 0
does not supply an algorithm
Missing weighted closure / normal-form bound
Plus full expected bit-cost accounting
