Diagnostic progress route now uses finite differences

Some(sink) -> complete progress module -> exact reviewed recurrence

Canonical source 87f3581c... | all other bytes and diagnostic sites unchanged

6398 ordered-result pairs + 20207 sequences + 32 boundary transitions

Actual counters: delta A=3p+2-kp; delta M=-kp; delta visits=-k(p-1)

Real helper: 3 exact events, 8 milestones, payload, disabled sink and Noop

Attempt1: wrapper ENOENT, 20.784s; preserved, no tests, group reaped

Reviewed successor: passed 33.860s; exit0, unchanged inputs, empty group

Actual module integration; complete root adapter and final binary binds remain
